

NEWS RELEASE

Dynalog Technology Displayed in China

Detroit, MI - July, 2013

Dynalog, Inc., a company headquartered in Bloomfield Hills, Michigan (USA), participated in two very successful tradeshows in China. Both events were great platforms to increase company awareness amongst the Chinese robot manufacturers, and create enthusiasm in the product lines. The products that Dynalog showcased were the DynaCal™ robot calibration system, the CompuGauge™ robot performance analysis system, and the AutoCal™ TCP/robot mastering recovery system.

Mr. Anil Raghavan, Director of Business Development at Dynalog, commented saying “the Chinese market is relatively new for us, and it is very important because there is so much potential there due to the booming robotics industry.” Anil added, “we have teamed up together with a Chinese distributor, Worldwide Technologies, to address the robot calibration and performance needs of the local robot manufacturers.” “Steven at Worldwide Technologies has done an excellent job in helping us succeed there and we have already enjoyed some successes due to the shows.”
